

# Metec is boltcircle cover and axle cap supplier to different truck and bus manufacturers.

Our selection includes products for both steel and alloy wheels. We use high quality stainless steel material (AISI 304). We use 1mm material, which is thicker than used by our competitors, to satisfy the high quality levels demanded by vehicle manufacturers.

We also offer the option to have your own logo stamped onto the wheel cover.

Nearly 20 years, we have used unique bracket fitment system – brackets are bolted to the wheelcover. This offers a very secure fitment, which eliminates the loss of the wheel cover, even after several years of use.

**Unique bracket fitment system – brackets are bolted to the wheelcover.**
